

Construction of Oiapoque site in Brazil

Voltalia (Euronext Paris, ISIN code: FR0011995588), renewable energy based electricity producer, announces the completion of the construction works at the Oiapoque hybrid plant in Brazil.

For 15 years, Voltalia will cover 100% of the electricity needs of Oiapoque, a city of 23,000 inhabitants, not connected to the national grid and located in Amazonia, in Brazil.

As a reminder, Voltalia had won the Oiapoque tender in Q4 2014 (see press release dated October 2, 2014).

Voltalia then stood out as the only competitor offering a hydro/thermal mix in order to generate a cleaner and cheaper electricity than the one produced by the diesel generators used so far by the city. As a matter of fact, Voltalia's solution avoids at least 85% of greenhouse gas emissions.

Voltalia will supply power non-stop, 365 days a year, 24/24 up to a contractual maximum of 9 MW during peak periods. To ensure the power supply continuity, including during maintenance operations and low water periods on the Oiapoque River, Voltalia will maintain two facilities:

- A 12 MW thermal plant, expected to be commissioned April 2016 at the latest; and
- A 7.5 MW hydroelectric plant, located nearby, at Salto Cafesoca on the Oiapoque River, whose construction works will start once all the technical studies are completed. Commissioning is expected in 2021 at the latest.

The hydroelectric plant will be given priority to generate power, while the thermal plant will ensure production at peak-times, during the dry season and maintenance shutdowns.

The plant is now available to Voltalia's client, who can either wait for the official beginning of the contract (in April 2016) or benefit from Voltalia's advance to start production earlier.

"Voltalia is particularly proud of this project, says Sébastien Clerc, CEO of Voltalia. We were the only ones to be able to develop a renewable plant in this remote Amazonian city. Voltalia's solution will divide by 7 GHG emissions while fostering local development thanks to a lower electricity cost."

More information on the company's website: www.voltalia.com

Next on the agenda: Q3 2015 revenues to be released on October 29, 2015 (post trading).

About Voltalia (www.voltalia.com)

- *Producer of electricity from renewable energy, Voltalia develops, owns and operates power plants representing a total installed capacity of 271 MW in four energy segments: wind, solar, hydro and biomass.*
- *Voltalia is present in metropolitan France, Brazil, Greece, French Guiana and Morocco.*
- *Voltalia is listed on Euronext Paris since July 2014 (FR0011995588 – VL TSA).*
